ABOUT ME

What I really love is working with everything related to the web, especially when we are talking about front-end. Javascript is an incredible world of possibilities, and I am fascinated by that. I like to solve problems always trying to choose the best and more performatic alternative, but sometimes we need to deliver then, refactor! I enjoy working on small teams, I think we can make big things working with a few incredible minds. A few words can describe my skills:

- Great experience in web design, web development, and graphic design.
- Specializing in W3C web standards based markup, utilizing semantic markup for structure and CSS for presentation.
- Always trying to learn a new crazy-last-week-mini-framework or creating new mini-ones
- Experience as a team leader
- Worked with remote teams
- Adaptive to new applications and technologies.

MY EXPERIENCE

For a full list of companies that I've worked for, please visit <http://linkedin.com/in/djalmaaraujo/>

Lead UI Engineer

Wobo Inc

(May 2015 – Present | Walnut Creek, CA)

- Team manager
- Focused on developing new internal solutions, such as: CMS and team integration systems

EDUCATION

Faculdade Marista do Recife

Sistemas Para internet | Superior

(2007.1 – 2009.2)

WORTHWHILE MENTIONS

Some projects that I enjoy code them.

Pull Request Trello

github.com/djalmaaraujo/pull-request-trello

Create a Pull-Request using trello cards information automatically. This CLI will increase your productivity if you use Trello as your software for mananing projects and github.

FaceGroup

github.com/djalmaaraujo/facegroup

Facegroup is a new perspective of how groups should look like. I have too many groups to read and get updates from, so the main goal of this project is to create a new way of reading groups, using the same idea as twitter lists. You can choose which groups are related to a specific subject, then group all into a single timeline. For example, if you have 5 groups of Javascript/Node, you can read a single timeline with all posts. Also, there are some good features like: Comments, Favorite posts, Cross-plataform view, etc. This a working in progress project.

customelements.io

github.com/webcomponents/customelements.io

CustomElements.io is where community-members show their awesome Web Components. I'm an active contributor for this project. I believe that the web is about to change and Web components is a good path to follow. I also maintain the fetch-service repository, which is the crawler for all custom elements. We fetch bower, npm and github projects

into a single api. [fetch-service repository](#)

TALKS

- [Mercado Tecnológico - De Recife para o mundo](#) - Dec 5, 2014
<https://speakerdeck.com/djalmaaraujo/mercado-tecnologico-de-recife-para-o-mundo>
- [Node webkit](#) - Aug 14, 2014
