Recife, Brazil

ABOUT ME

Javascript is an incredible world of possibilities, and I am fascinated by that. I like to solve problems always trying to choose the best and more performative alternative, but sometimes we need to deliver, then, refactor! I enjoy working on small teams, I think we can make big things working with a few incredible minds. A few words can describe my skills:

- JavaScript, Node.JS, Electron (S2), Ruby, Web API's, HTML5, CSS3, Groovy.
- Experience as a team leader
- Experience with remote teams (+6 years)
- Great experience in web design, web development and graphic design.
- Adaptive to new applications and technologies.
- Always trying to learn a new crazy-last-week-mini-framework or creating new mini-ones

EXPERIENCE AS EMPLOYEE

Principal Developer
Follett Higher Education
(August 2017 – Present | Westchester, IL)

The Principal developer is responsible for the development of all areas and projects. Follett has API's built using Groovy, PHP, and other technologies. They are all based in the AWS Stack, which is also a partnership between the developer and the DevOps team. The developer also implements and maintain some mobile applications using React Native framework. Particularly, in this case, I am also responsible for some of the design work needed for certain projects.

Senior Front-end Developer
Close.io
(March 2017 – July 2017 | San Francisco, CA)

Development and maintenance of the close.io CRM Front-end. Different Javascript frameworks and heavy work with Atom Electron applications (S2). Great interaction with the current designer implementing some design principles and UX improvements.

EXPERIENCE AS ENTREPRENEUR

Founder / CTO
TRADERTAX
(December 2018 – Present | Remote — Brazil

TRADERTAX is a brazillian accounting solution for investors. We automate broker notes from all different brokers in the Brazilian stock market. We deliver tax calcs and amazing reports for the investor. I handle everything, since I am the solo-developer in the project. It's a Rails/React/Bootstrap project with a good amount of automation using Puppeteer.

Founder / Advisor
KeepClear
(November 2018 – Present | Remote — Brazil

KeepClear automates your compliance, due diligence and monitoring routine for suppliers, outsourcers and partners in Brazil, bringing security and efficiency to risk management. I basically handle all the initial Rails/React/GraphQL stack with other partners.

Lead UI Engineer
Wobo Inc
(May 2015 – March 2017 | Walnut Creek, CA)

The Lead UI Engineer is responsible for leading the development of the UI components across all Woboinc projects. Implements and maintain base UI structures across company projects, creates and maintain style guides for company projects, analyzes and optimizes front-end performance, trains other developers on UI base structures, style guides, and best practices and more.

Software Engineer
Wobo Inc
(May 2013 – May 2015 | Walnut Creek, CA)

Working in different projects with new technologies, such as: NodeJS, Ruby and NoSQL databases. Focused front-end development and improvements for UI/UX.

Sales Engineer
Liferay, Inc.
(January 2013 – May 2013 | Brazil)

- Consultant on big clients of Liferay
- Business strategies to improvement the sales area using technology of Liferay Portal

Software Engineer
Liferay, Inc.
(July 2012 – May 2013 | Brazil)

- Core developer of AlloyUI framework.
- Improvements on Liferay Portal with Java technologies, high-level and performatic Javascript.
- Consultant on big clients, focusing on front-end performance for high traffic applications

Front-end Manager, CTO and Business Partner
Pianolab
(January 2009 – July 2012 | Brazil)

I started as an employee and after a few months I was asked to become a partner. I used to manage the developer team and was in charge of all technology related tasks.

EDUCATION

Faculdade Marista do Recife
Internet Systems | Superior (Computer Science Equivalent)
(2007.1 – 2009.2)

WORTHWHILE MENTIONS
Some projects that I enjoy code them. To see all projects and my open source contributions, check out my github.

paste'n'Playlist!
https://github.com/djalmaaraujo/paste-and-playlist

Paste a list of songs with the pattern: **Iron Maiden - Run to the hills (artist name - song title)** and the tool will try to create a playlist with the Spotify tracks found. You can choose to add the results to an existing playlist or create a new one.

Semaphore Menubar
github.com/djalmaaraujo/semaphore-menubar

Semaphore Menubar is an Open Source Unofficial Semaphore CI Desktop App. At Follett, my team and I use semaphoreci.com to run our tests and we wanted to avoid keeping a chrome tab opened all the time to see if the build passed. So I created this Electron Application, a multi platform way to receive notifications of our builds using semaphore ci.

Pull Request Trello
github.com/djalmaaraujo/pull-request-trello

Create a Pull-Request using trello cards information automatically. This CLI will increase your productivity if you use Trello as your software for mananing projects and github.

Wrk
github.com/djalmaaraujo/wrk

wrk logger is a daily logger for tasks/activities. Useful to record standup notes/meetings/etc.

Cowdown - Another markdown app
github.com/djalmaaraujo/cowdown

Cowdown is a fun and powerful markdown application built on top of Node-Webkit (nw.js). You can use shortcuts, video previews, twitter hashtags, github markdown syntax, etc.
